
I didn't write the code.
Agents did.
I asked the questions, made the decisions, directed the work.
John Nelson · Weft

OCT 3, SATURDAY NIGHT → SUBMITTED OCT 6

64 hours

231 files

38,593 lines

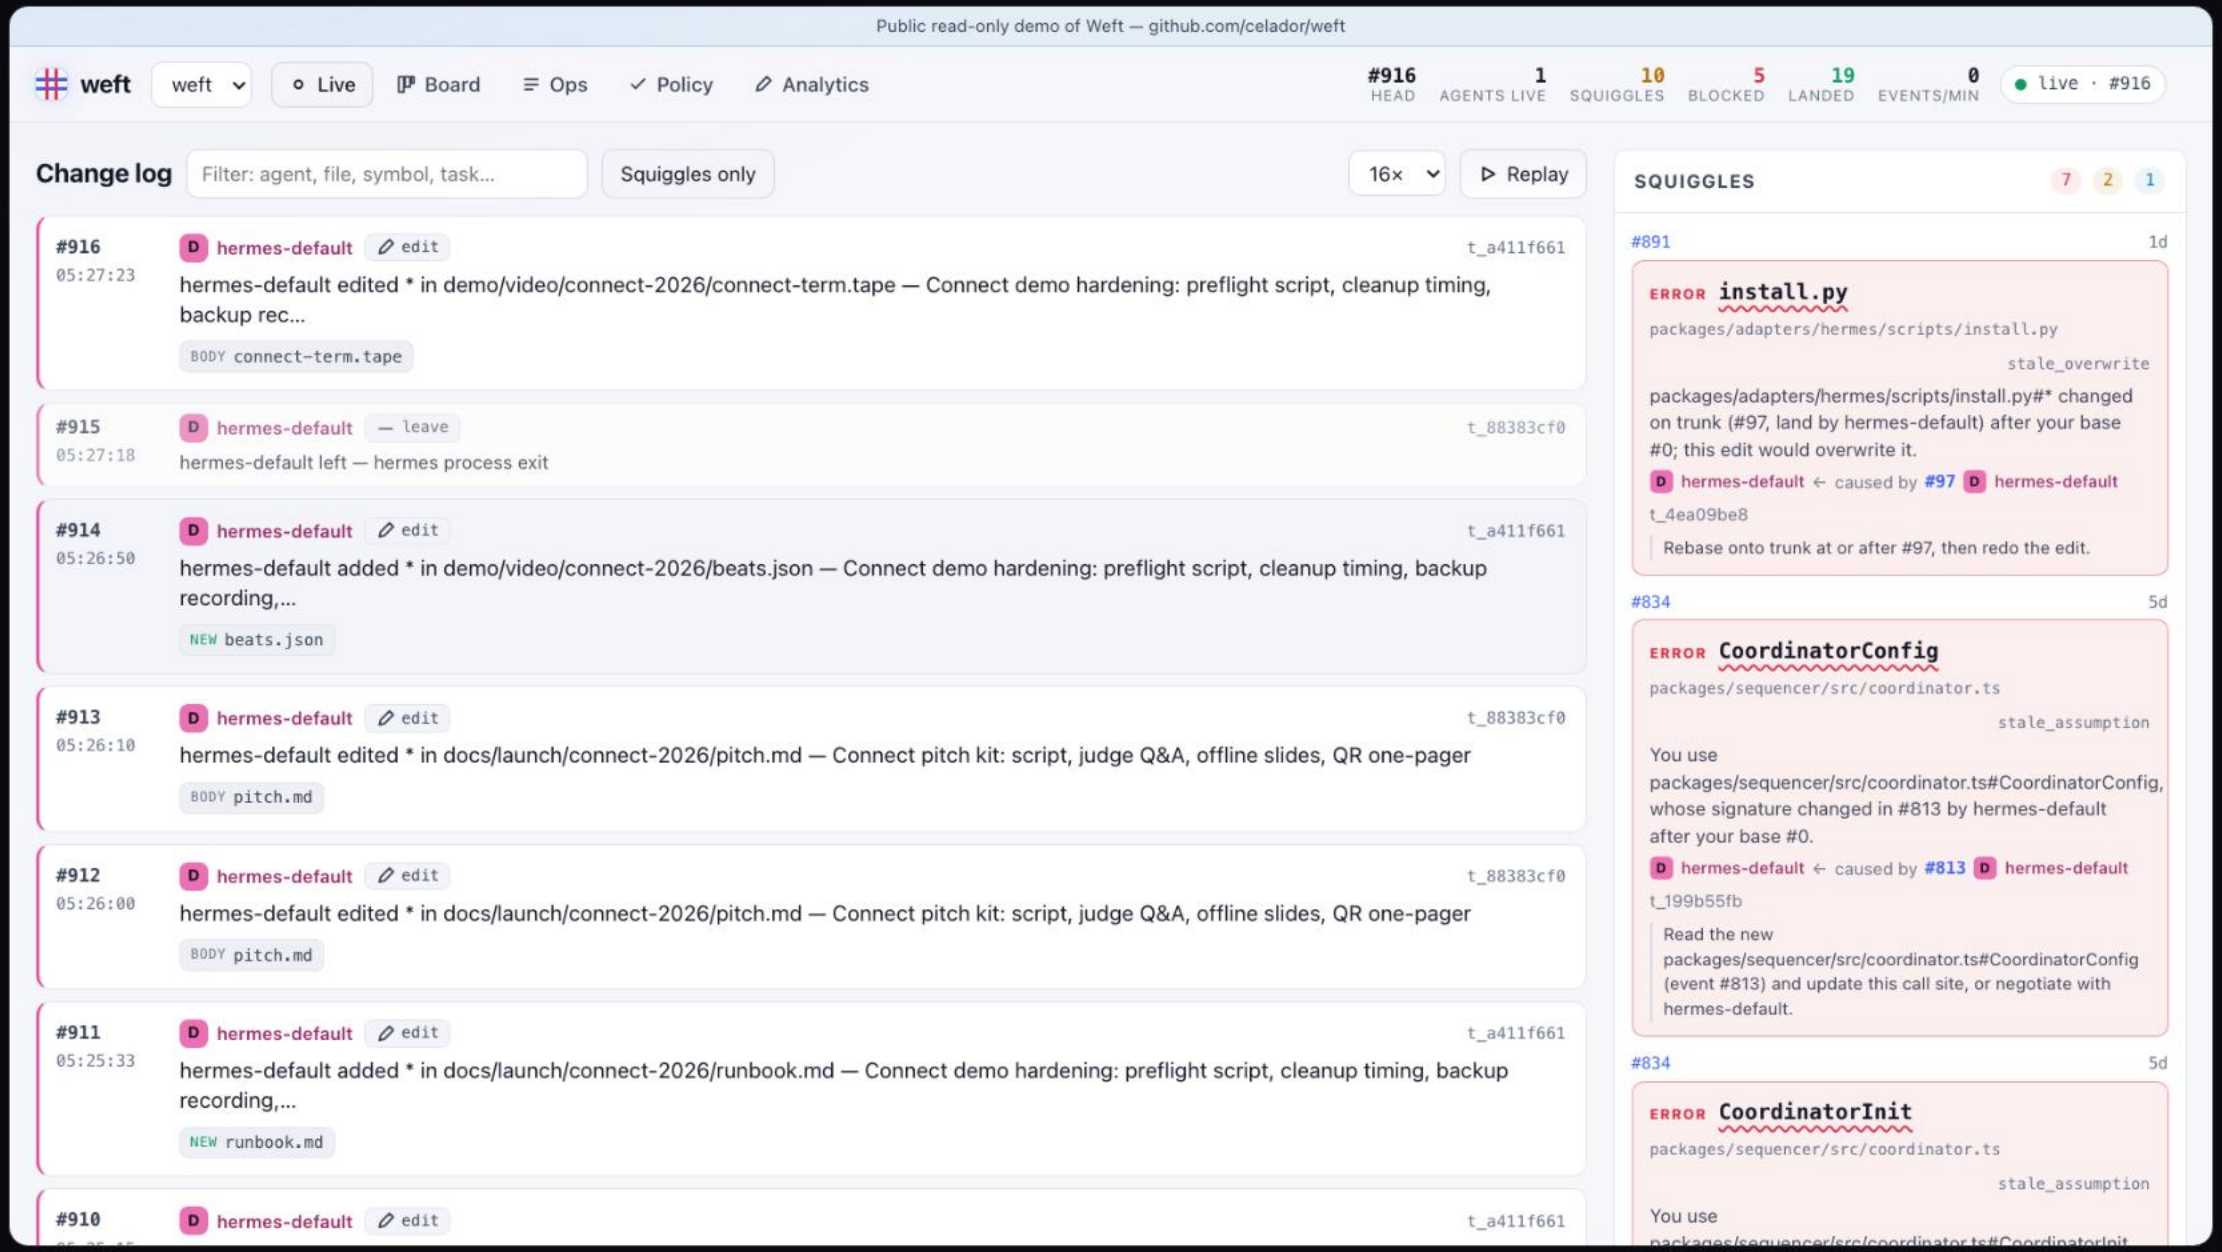

Every commit authored by an agent.

627 events

460 edits

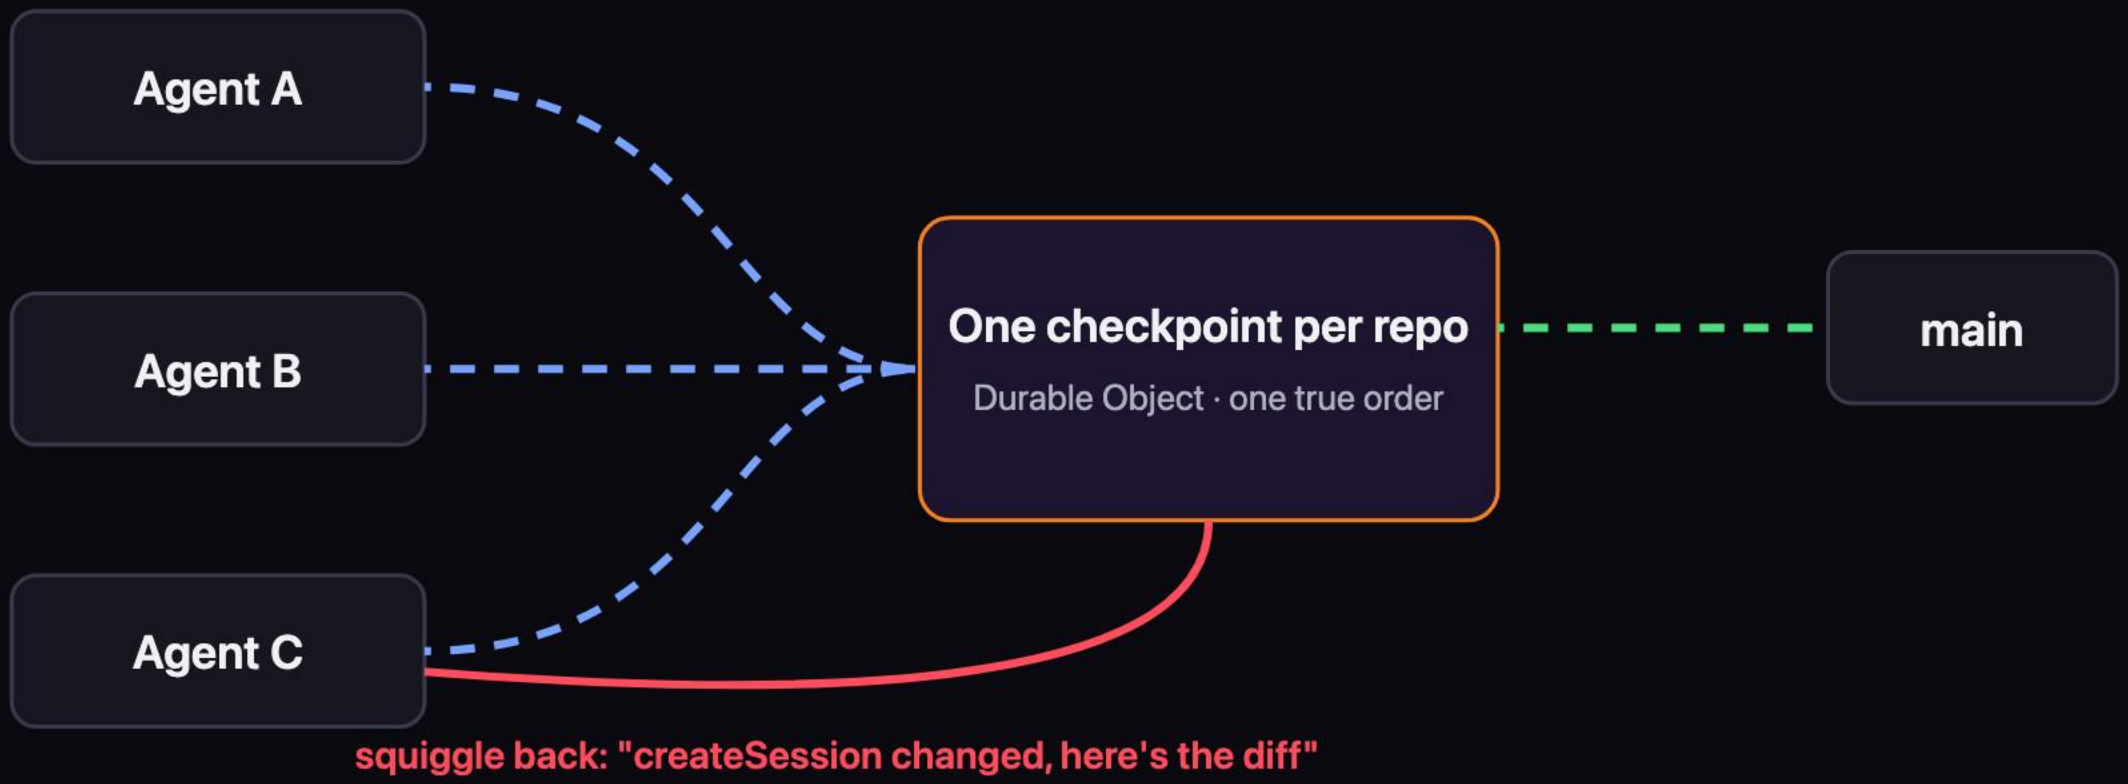

59 waits

Weft's own log, first 11.3 hours of the build

weft.elier.ai · every agent edit, in order, live

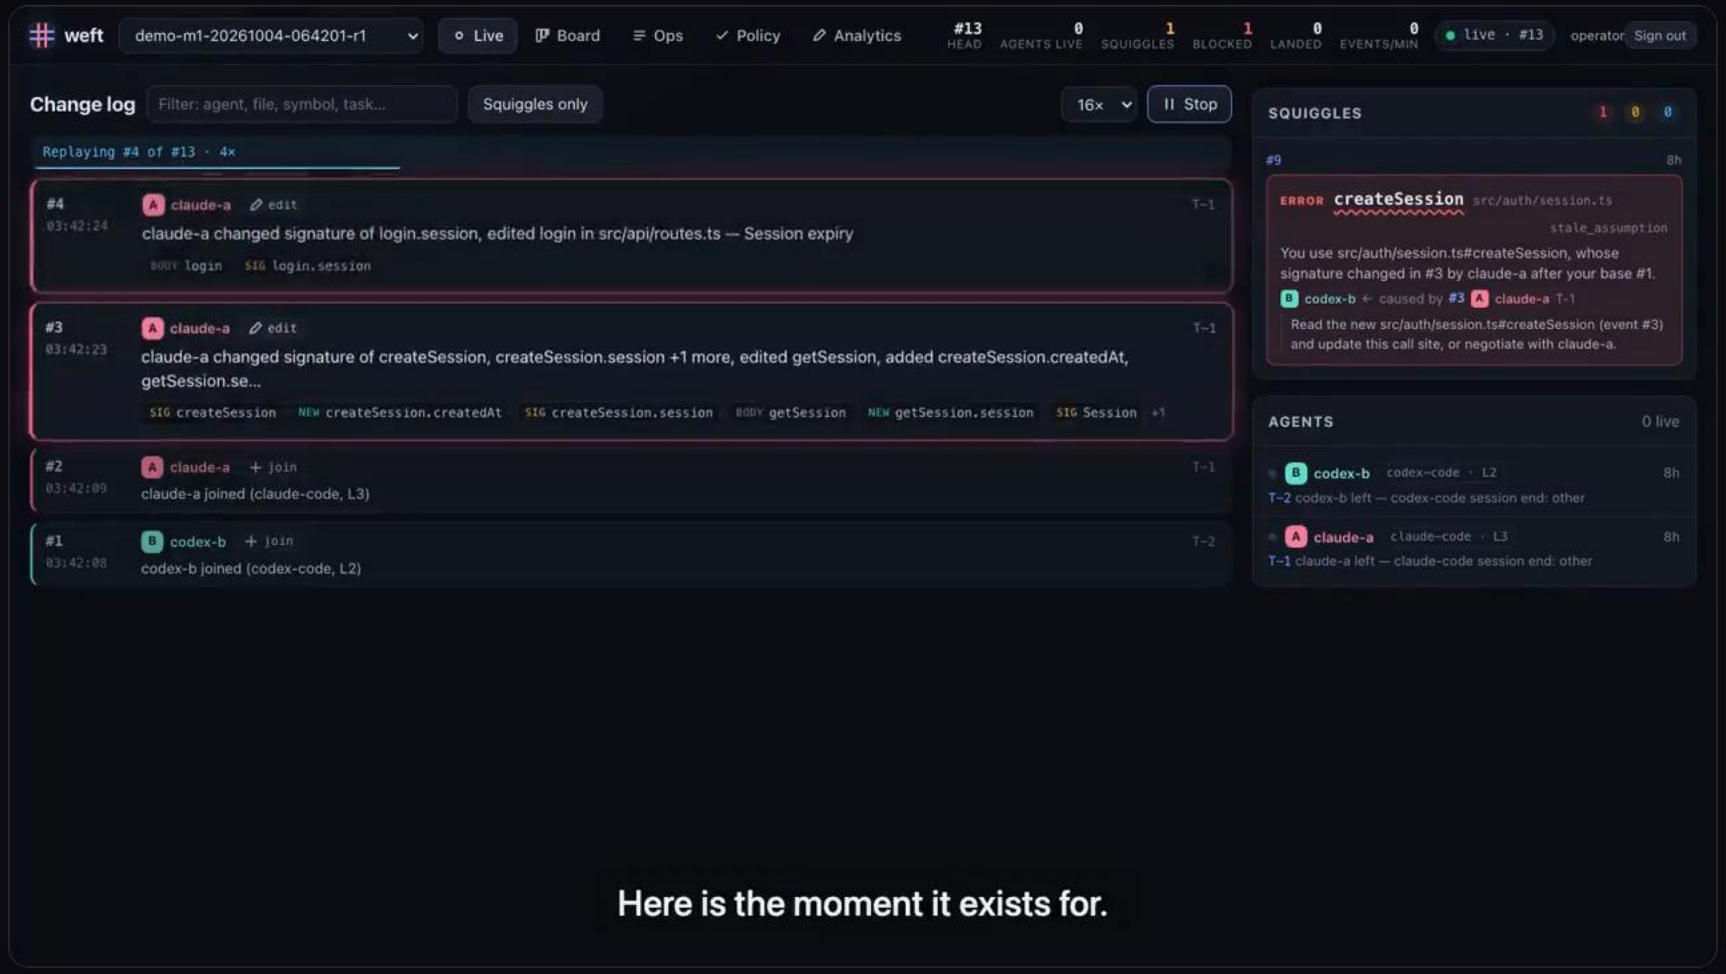

HOW IT WORKS

Agent A
Agent B
Agent C
One checkpoint per repo
Durable Object · one true order
main
squiggle back: "createSession changed, here's the diff"

ON CLOUDFLARE · PROTOCOL RUNS ANYWHERE

Workers	API agents call + the site
Durable Object	per-repo sequencer: one order
Artifacts	git storage
Workflows + Queues	land work on main

WCP, the Weft Coordination Protocol · open draft v0.1 · any harness, any host

Claude Code changes `createSession` → Codex's edit is refused → it adapts → accepted

WEFT COORDINATED THE AGENTS BUILDING WEFT

918	679	27	60	5
events	edits	landings	waits	refused

Weft's own log, to Oct 19 · event 834 refused because event 813 changed a type; next try accepted

1 Explore	**2** Dig in	**3** Think up solutions	**4** Discuss alternatives	**5** Decide	**6** Edge cases
7 Delegate	**8** Build the system	**9** Hand over authority, keep sign-off	**10** Verify & steer	**11** Use it, find gaps	**12** Back to step 1

WHY IT MATTERS

One agent is a tool. Ten agents on one repo is a **team**.

Today they find out at merge time. Too late.

Open protocol: discussion proposal at the Agentic AI Foundation

Interest from the Beads team

Prototype: TypeScript/JavaScript only, not in production yet

Red squiggles for teams of coding agents.

If the code editor disappears, agents still need squiggles.

weft.elier.ai

I'm looking for my next builder role.
